Hi! Hope you are doing well!

A little about me; my name is Haoyu Joshua Fan, and I am a Computer Science major in the College of Natural Sciences at the pristine University of Texas at Austin. I am currently pursuing a Bachelor's of Science in Computer Science as well as a Master's Degree. Additionally, I am in the process of earning my Applied Statistical Modelling Certificate with the College of Natural Sciences.

Going back farther, I was born in Tulsa, Oklahoma, raised in Houston, Texas, and now live in Austin, Texas while my family lives in Anchorage, Alaska (Yes, it's crazy. Yes, it's because of oil/petroleum). I enjoy playing sports like volleyball, tennis, basketball, and spikeball. I love spending time in nature and enjoying the environment. I am fascinated by almost all technology both software and hardware and have been for so long I can't remember the last time I was bored by tech. Overall, I just love spending time with family and friends, growing closer to each other, and supporting each other.

Looking into the future, I hope to become a software engineer for a startup company dedicated to changing the world in a better way. However, to attain the skills to fulfill this goal, I wish to first work as a software engineer at a large corporation, gaining insight into the genuine technological world and how it functions. After learning specialized skills at a large corporation, I hope to find the aforementioned start-up company to improve the world. Specifically, I hope to use computer programming and software development to create robots and A.I. that have the ability to go around the world (mainly oceans and beaches), detect various objects, and dispose of them accordingly whether trashing it or recycling it. I also hope to use similar robots and A.I. to bring medicine, education, and aid to third-world countries who lack these resources.

Overall, I am just a small person with huge aspirations in a big world that's getting smaller by the minute. Hope you learned something about me! If you would like to know more or simply get in contact, just click on the contact link on my website (fanhao000.github.io/personal) to find all the ways you can communicate with me. Thanks!
